Test Capabilities Enhancement with SPEA

GT technologies recently implemented a new Flying Probe test system from **SPEA**.

It strengthens our ability to support both NPI and production, with high flexibility and efficiency.

In today's fast-moving electronics industry, the ability to quickly adapt to design changes while maintaining high quality is critical. Flying Probe technology enables us to deliver exactly that, reducing both cost and time-to-market.

The SPEA 4060 platform enables

- High test coverage
- Efficient test of complex PCBAs at high throughput
- Fast setup and rapid transition between products
- Increased flexibility for low-to-mid volume production
- Reduced NPI cycle time
- Improved overall product quality

This investment is another step in our commitment to providing advanced, scalable, and reliable manufacturing solutions to our customers.
